CLAIMS

complementary sequence, or a portion of such a sequence. nucleotide sequences set out in SEQ ID NOs: 1 - 13,232 or a nucleic probes, said probes comprising any one of the from human placenta comprising a plurality single exon probes for measuring gene expression in a sample derived 1. A spatially-addressable set of single exon nucleic acid

of probes is separately and addressably amplifiable. probes as claimed in claim I wherein each of said plurality 2. A spatially-addressable set of single exon nucleic acid

of probes is separately and addressably isolatable from probes as claimed in claim 1 wherein each of said plurality 3. A spatially-addressable set of single exon nucleic acid

probes comprise any one of the nucleotide sequences set out probes as claimed in any of claims 1 to 3 wherein said 4. A spatially-addressable set of single exon nucleic acid

in SEQ 1D NOS.: 13,233 - 26,232.

said plurality.

5. A spatially-addressable set of single exon nucleic acid

common primer. said plurality of probes is amplifiable using at least one probes as claimed in any of claims 1 to 4, wherein each of

. aedoxq comprises between 50 - 20,000 single exon nucleic acid probes as claimed in any of claims 1 to 5 wherein the set 6. A spatially-addressable set of single exon nucleic acid

35 probes as claimed in any of claims 1 to 6, wherein the 7. A spatially-addressable set of single exon nucleic acid

MO 01/21717 bCL\n201\00092

average length of the single exon nucleic acid probes is between 200 and 500 bp.

- 8. A spatially-addressable set of single exon nucleic acid probes as claimed in any of claims 1 to 7, wherein at least probes asid single exon nucleic acid probes lack prokaryotic and bacteriophage vector sequence.
- 9. A spatially-addresable set of single exon nucleic acid probes as claimed in any of claims 1 to 8, wherein at least 50% of said single exon nucleic acid probes lack homopolymeric stretches of A or T.
- 10. A spatially-addressable set of single exon nucleic acid frobes as claimed in any of claims 1 9 characterised in that said set of probes is addressably disposed upon a substrate.
- 11. A spatially-addressable set of single exon nucleic acid probes as claimed in claim 10 wherein said substrate is selected from glass, amorphous silicon, crystalline silicon and plastic.
- 12. A microarray comprising a spatially addressable set of single exon nucleic acid probes as claimed in any of claims
- 13. A single exon nucleic acid probe for measuring human gene expression in a sample derived from human placenta

  10 comprising a nucleotide sequence as set out in any of SEQ fragment thereof wherein said probe hybridizes at high stringency to a nucleic acid molecule expressed in the stringency to a nucleic acid molecule expressed in the

of claims 13 - 20, wherein said probe lacks homopolymeric

stretches of A or T.

derived from human placenta, comprising: 22. A method of measuring gene expression in a sample

from mRNA of human placents; and then said first collection of nucleic acids derived collection of detectably labeled nucleic acids, contacting the microarray of claim 12, with a first

measuring the label detectably bound to each probe of

said microarray.

23. A method of identifying exons in a eukaryotic genome,

comprising:

32

30

۶Į

01

detecting specific hybridization of detectably labeled genomic sequence of said eukaryote; and then algorithmically predicting at least one exon from

nucleic acids to a single exon probe,

is a single exon probe having a fragment identical in from mRNA from the placenta of said eukaryote, said probe wherein said detectably labeled nucleic acids are derived

according to claim 12, and said fragment is selectively predicted exon, said probe is included within a microarray sedneuce to, or complementary in sequence to, said

hybridizable at high stringency.

24. A method of assigning exons to a single gene,

identifying a plurality of exons from genomic comprising:

sequence according to the method of claim 23; and

\*\*\*\*\*

hybridization to single exon microarrays having a plurality of tissues and/or cell types using measuring the expression of each of said exons in a

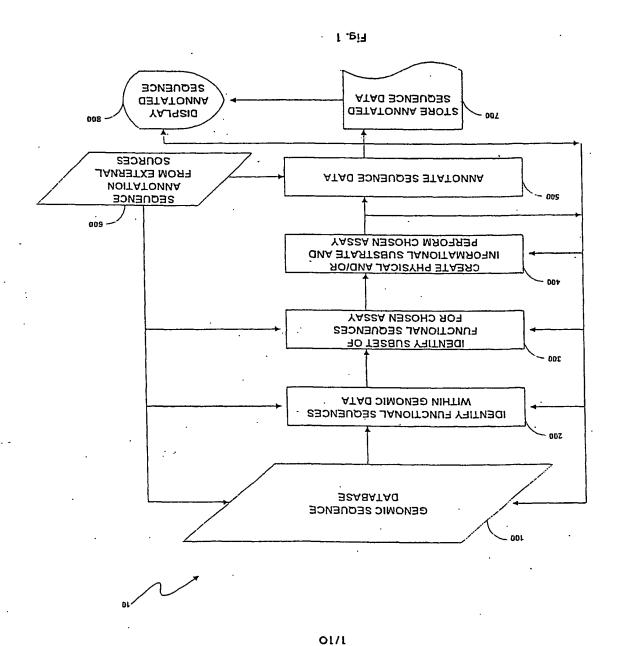

probe with said exon,

WO 01/57272 PCT/US01/00663

wherein a common pattern of expression of said exons in said plurality of tissues and/or cell types indicates that

- NOs: 1 26,232 which encodes a peptide.
- SEQ ID Nos: 1 26,232.
- SEQ ID Nos: 26,233 38,837.

mational application No.

X No protest accompanied the payment of additional search fees.
Remark on Protest  The additional search fees were accompanied by the applicant's protest.
4. Ho required additional search fees were timely paid by the applicant. Consequently, this intermational Search Report is restricted to the invention first mentioned in the dalms; it is covered by claims Nos.:
·
(Curse and) 47.7
I-27 (partially)
3. X covers only those claims for which lees were paid, specifically claims Nos.:
· ·
2. As all searchable dains could be searched without effort justifying an additional fee, this Additional fee.
2. As all searchable dalms could be searched without effort justifying an additional fee, this Authority did not invite payment

an extent that no meaningful international Search can be carried out, specifically:  —— because they relate to parts of the international Search can be carried out, specifically:
Decause they relate to subject matter not required to be exarched by this Authority, namery:  Claims Mos.:  Claims Mos.:  An extent that no meaningful international Search can be carried out, specifically:  an extent that no meaningful international Search can be carried out, specifically:

This International Searching Authority found multiple (groups of) inventions in this international application, as follows:

1. Claims: 1-27 (partially)

A probe comprising the nucleotide sequence SEQ ID I (see claim 13), or a fragment thereof having a length of at least 15 bp (see ISA form 206), in particular comprising the sequence SEQ ID 13233(see p. 91 of the description, which indicates that this sequence corresponds to the exon comprised in SEQ ID 1), spatially addressable set of probes comprising the said sequence (claim 12), a method for measuring gene expression (claim 22), a method for identifying exons gene expression (claim 22), a method for dentifying exons (claim 24) comprising using the said arrays, the peptide (claim 24) comprising using the said arrays, the peptide encoded by SEQ ID 1 or 13233 (claims 26-27) having the encoded by SEQ ID 26233 (claims 26-27) having the sequence SEQ ID 26233 (see ISA form 206), which is the encoded by SEQ ID 13233 (see p. 69 of the description).

2. Claims: 1-27(partially)

A probe comprising the nucleotide sequence SEQ ID 2, or a fragment thereof having a length of at least 15 bp (see ISA form 206), in particular comprising the sequence SEQ ID 13234(see p. 91 of the description, which indicates that this sequence corresponds to the exon comprised in SEQ ID 2), spatially addressable arrays comprising the said sor identifying exons and a method for assigning exons to a single gene comprising using the said arrays, a peptide for identifying exons and a method for assigning exons to a single gene comprising using the said arrays, a peptide encoded by SEQ ID 2 or 13234 having the sequence SEQ ID 26234, which is the translation from SEQ ID 13234 (see p. 69 of the description).

...Inventions 3-13232: similar subject-matter as above related to SEQ IDs 3-13232.

Continuation of Box I.2

The following statements concerning the impossibility of performing a meaningful search according to Art. 17(2) PCI are made for the subject-matter for which a search has ben performed and which has been identified as inventions 1-2 in PCI form 206.

1) Claims 1-3, 5, 6, 8-15 and 18-24 relate to fragments of undisclosed length or characteristics which cannot therefore be meaningfully searched. These claims have thus been searched only insofar as related to fragments having a length of at least 15 nt (see claim 15 and description fragments).

2) Present claims 1-12 and 22-24 relate to an extremely large number of possible sets of nucleic acid probes comprising SEQ ID I or 2 and microarrays comprising the said sets. Therefore, the claims lack clarity and concisesness (Art. 6 PCI) to such an extent as to render a meaningful and concisesness (Art. 6 PCI) to such an extent as to render a meaningful search over their whole scope impossible. Consequently, with respect to the said sets and microarrays the search has been carried out only insofar as related to the SEQ ID I and 2 as such.

3) In view of the absence of any indication as to which other peptides could be encoded by SEQ ID I and 2, the search with respect to claim 26 has been limited to the peptide sequences actually disclosed in the application, i.e. 26233 and 26234 (Art. 6 PCI).

4) Claims 15-21 relate to nucleic probes, solely defined in that they code for polypeptides having the sequence SEQ ID 26233 or 26234. However, a peptide is potentially coded by an extremely large number of nucleic an extent as to render a meaningful search over their whole scope an extent as to render a meaningful search over their whole scope impossible. The search has thus been limited to SEQ ID i, 2, 13233 and 13234.

The applicant's attention is drawn to the fact that claims, or parts of claims, relating to inventions in respect of which no international search report has been established need not be the subject of an international preliminary examination (Rule 66.1(e) PCI). The applicant is advised that the EPO policy when acting as an international preliminary Examining Authority is normally not to carry out a preliminary examination on matter which has not been searched. This is preliminary examination on matter which has not been searched. This is receipt of the search report or during any Chapter II procedure.
